

Satya Venkata Vignesh Balusu

Java Full Stack Developer | Spring Boot | Microservices | CI/CD | Healthcare Domain
+91-9494278857 | balusuvignesh@gmail.com | github.com/vignesh1809-stack

PROFESSIONAL SUMMARY

Results-driven Java Full Stack Developer with 3+ years of experience building and maintaining enterprise backend services, RESTful APIs, and microservices using Java and Spring Boot. Proven expertise in SQL stored procedures, backend-to-UI integration, CI/CD pipeline automation (GitHub Actions, Docker), and Agile delivery. Experienced in the US Healthcare domain (claims processing and practice management). Strong track record of zero-defect releases, 100% on-time delivery, and 80% MTTR reduction on critical production issues. Hands-on with shell scripting, incremental data processing, and cross-functional collaboration with QA and business stakeholders.

TECHNICAL SKILLS

Languages	Java (Primary), Python, JavaScript, Shell Scripting (Bash)
Backend	Spring Boot, Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, REST API, Microservices, Kafka, Maven
SQL & Data	MySQL — stored procedures, query optimization, indexing, incremental/MERGE-based data processing, performance tuning
CI/CD & DevOps	GitHub Actions, Docker, Git, Azure DevOps (familiar), Linux, Bash scripting, selective DEV/QA/PROD deployments
Frontend & UI	React.js, Redux, HTML5, CSS3, JavaScript ES6 — backend-to-UI integration, UI/API data accuracy
Testing & QA	Test case design (200+), end-to-end validation, root cause analysis, Postman, Swagger/OpenAPI
Gen AI	LangChain, OpenAI API, Google Gemini, RAG, ChromaDB, FAISS, NLP
Domain	US Healthcare — Claims Processing, Practice Management, Provider-side Applications
SDLC	Agile, Scrum, Requirements Analysis, Documentation, Stakeholder Reporting

EXPERIENCE

Unisoft Solutions | Software Engineer — Java Full Stack & Generative AI

Jan 2025 – Present

- Developed and maintained 10+ production-grade Spring Boot microservices and REST APIs with clean layered architecture, serving enterprise healthcare clients at 99.9% uptime SLA across DEV/QA/PROD environments.
- Designed and managed complex SQL stored procedures and incremental/MERGE-based data processing pipelines in MySQL — improved average API response time from 1.8s to 400ms (78% improvement) through query optimization and indexing.
- Built and maintained CI/CD pipelines using GitHub Actions and Docker — implemented selective deployments across DEV/QA/PROD environments, cutting deployment time from 45 minutes to 8 minutes with 100% automated test gate enforcement.
- Integrated 6+ React.js and Redux frontend modules with Spring Boot backends — debugged and resolved UI vs backend data mismatches, reducing page load time by 35% with zero client complaints across all quarterly releases.
- Automated 200+ test case scenarios and coordinated with QA and business stakeholders to validate data accuracy and functionality — achieved zero failed test gate releases across 4 consecutive sprints.
- Facilitated root cause analysis on 20+ critical production incidents, delivered hotfixes reducing MTTR by 50% and permanently eliminating 3 recurring P1 incidents in the healthcare platform.
- Integrated Generative AI (LangChain, OpenAI API) into 3 live modules — NL-to-SQL agent (saved 15+ analyst hours/week), NLP document Q&A (92% accuracy), and automated code review assistant (cut review time by 40%).

- Compiled accurate technical documentation including flowcharts, API specifications (Swagger), deployment scripts, and status reports; delivered 95%+ story points on schedule across all Agile sprints.

Intechfy Solutions | Associate Software Engineer — Java Full Stack

May 2023 – Dec 2024

- Developed 5+ full-stack enterprise features using Java, Spring Boot, React.js, and MySQL — each delivered on time within 2-week sprint cycles, handling 10,000+ daily transactions at sub-200ms response time under production load.
- Maintained and optimised backend SQL stored procedures, adapting Spring Boot services to new hardware, requirements, and data formats — resolved 15+ production defects reducing bug backlog by 40% within 6 months.
- Refactored 3 legacy monolithic modules into clean Spring Boot microservice components applying SOLID principles — reduced codebase complexity by 30% and cut new developer onboarding from 3 days to 1 day.
- Wrote and maintained deployment and automation scripts; prepared programming project specifications and status reports for project managers and stakeholders throughout the SDLC.
- Supported UI-integrated datasets and APIs, ensuring accurate data visibility in frontend applications; debugged UI vs backend data mismatches in collaboration with frontend teams.

PROJECTS

Healthcare Claims & Practice Management — MDManage Enterprise

Stack: Java, Spring Boot, React, Redux, MySQL, REST API

- Enhanced a US Healthcare claims platform processing 10,000+ daily transactions — analyzed stored procedures and Spring Boot services, optimising MySQL queries to improve API response time from 1.8s to 400ms (78% improvement).
- Refactored 4 legacy modules into Spring Boot microservices, reducing code duplication by 45%; produced technical documentation and flowcharts cutting new developer onboarding time by 67%.
- Built 5 React/Redux UI modules for provider-side workflows; debugged UI vs backend data discrepancies ensuring accurate data visibility — delivered on time with zero external complaints across all quarterly releases.

CommerceCore API — E-Commerce Platform

Stack: Java 17, Spring Boot 3, Spring Security JWT, MySQL, Flyway, Stripe API, Docker, GitHub Actions

- Designed a production-ready e-commerce REST API using Spring Boot 3 — automated full CI/CD pipeline with GitHub Actions and Docker; selective DEV/QA/PROD deployments with 100% automated test pass gate.
- Implemented Spring Security JWT across 25+ endpoints; integrated Stripe Webhooks for automated event-driven payment workflows, reducing payment failure resolution time by 70%.

Retail QA Tool — NL-to-SQL Generative AI Agent <https://github.com/vignesh1809-stack/Retail-QA-Tool>

Stack: Python, LangChain, Google Gemini Pro, ChromaDB, HuggingFace, MySQL, Streamlit

- Built an AI agent converting natural language to MySQL queries — 94% query accuracy across 50+ test scenarios; ChromaDB few-shot vector search reduced hallucination by 60%, saving 15+ analyst hours per week.

JPMorganChase Software Engineering Simulation

Stack: Java 17, Spring Boot 3, Kafka, Spring Data JPA, H2, REST API

- Integrated Kafka into a Spring Boot 3 microservice processing 1,000+ financial transactions per second; implemented Spring Data JPA persistence and a REST balance-query endpoint with sub-100ms response time.

EDUCATION

B.Tech. Computer Science Engineering

Senior Secondary (MPC)

Secondary

Pragati Engineering College | CGPA 7.08

Tirumala Junior College / BIEAP | 98.2%

Narayana e-techno School / SSC | 100%
